Provisions**Findings of Facts**

Upon reviewing the investigator's report, I find all facts, relevant and material to the subject application, have been thoroughly investigated. Furthermore, I concur with the investigator that water is not available from the source in question; that there will be impairment of existing rights; and that there will be detriment to the public interest.

Therefore, I ORDER **denial** of Application No. S3-29797.

Your Right To Appeal

You have a right to appeal this Order to the Pollution Control Hearing Board (PCHB) within 30 days of the date of receipt of this Order. The appeal process is governed by Chapter 43.21B RCW and Chapter 371-08 WAC. "Date of receipt" is defined in RCW 43.21B.001(2).

To appeal you must do the following within 30 days of the date of receipt of the Order.

File your appeal and a copy of this Order with the PCHB (see addresses below). Filing means actual receipt by the PCHB during regular business hours.

- Serve a copy of your appeal and this Order on Ecology in paper form - by mail or in person. (See addresses below.) E-mail is not accepted.
- You must also comply with other applicable requirements in Chapter 43.21B RCW and Chapter 371-08 WAC.

INVESTIGATOR'S REPORT

Application for Water Right -- Buckley

Water Right Control Number S3-29797

Dan Tolleson, Department of Ecology

BACKGROUND

On August 16, 2011, letters were sent to all applicants for new surface water within the Walla Walla Basin, indicating that water was no longer available within the basin. Each applicant had the opportunity to either withdraw his or her application or request a formal decision. On August 23, 2011, Mr. Buckley requested that his application be processed and a formal decision issued.

Attributes of Proposal

An application to appropriate public ground water was submitted by Michael D. Buckley to the Department of Ecology on February 20, 1995. The application was accepted and assigned Surface Water Application No. S3-29797. The applicant proposes to divert water from Dry Creek in the amount of 2 cubic feet per second, from November 15 to April 15, for the irrigation of 124.9 acres.

Table 1 Application Summary

Name	Buckley
Priority Date	2/20/1995
Instantaneous Rate	2 cfs
Annual Quantity	374.7 acre feet
Purpose(s) of Use	Irrigation of 124.9 acres
Period of Use	11/15 – 4-15
Place(s) of Use	Within portions of Sections 13, 14, 21, 22, 23 24, and 28, all within T. 7 N., R. 34 E.W.M.

Legal Requirements for Approval of Appropriation of Water

RCW 90.03 authorizes the appropriation of public water for beneficial use and describes the process for obtaining water rights. Laws governing the surface water right permitting process are contained in RCW 90.03.250 through 90.03.340. In accordance with RCW 90.03.290, determinations must be made on the following four criteria in order for an application for water rights to be approved:

- Water must be available
- There must be no impairment of existing rights
- The water use must be beneficial
- The water use must not be detrimental to the public interest.

WAC 173-532 authorizes the management of all water within the Walla Walla River Basin, within Washington (WRIA 32). In accordance with WAC 173-532-045, future permits may only be approved if they meet the applicable requirement of law and one of the following criteria:

- Non consumptive uses
- Proposed water is from the basalt aquifer
- Use of proposed surface water occurs during non-closures and is for an environmental enhancement project.

This report serves as the written findings of fact concerning all things investigated regarding Water Right Application Number S3-29797.

Public Notice

RCW 90.03.280 requires that notice of a water right application be published once a week, for two consecutive weeks, in a newspaper of general circulation in the county or counties where the water is to be stored, diverted and used. Notice of this application was published in the Walla Walla Union-Bulletin during the weeks of November 22 and 29, 1995. One protest was received, which is further described in the Consideration of Protest and Comments.

Consultation with the Department of Fish and Wildlife

The Department must give notice to the Department of Fish and Wildlife of applications to divert, withdraw or store water (RCW 77.57.020).

State Environmental Policy Act (SEPA)

A water right application is subject to a SEPA threshold determination (i.e., an evaluation whether there are likely to be significant adverse environmental impacts) if any one of the following conditions are met.

- (a) It is a surface water right application for more than 1 cubic feet per second, unless that project is for agricultural irrigation, in which case the threshold is increased to 50 cubic feet per second, so long as that irrigation project will not receive public subsidies;
- (b) It is a groundwater right application for more than 2,250 gallons per minute;
- (c) It is an application that, in combination with other water right applications for the same project, collectively exceed the amounts above;
- (d) It is a part of a larger proposal that is subject to SEPA for other reasons (e.g., the need to obtain other permits that are not exempt from SEPA);
- (e) It is part of a series of exempt actions that, together, trigger the need to do a threshold determination, as defined under WAC 197-11-305.

Because this application does not meet any of these conditions, it is categorically exempt from SEPA and a threshold determination is not required.

INVESTIGATION

In considering the proposed application, the investigation included, but was not limited to, research and review of: (1) appropriate rules and statutes; (2) other water rights, claims, and applications in the vicinity; (3) USGS topographic maps and air photographs; (4) diversion works and proposed place of use; (5) Chapter 173-532 WAC Water Resources Program for the Walla Walla River Basin, WRIA 32 and Watershed Planning; (6) State of Washington Irrigation Guide (Natural Resources Conservation Service 1997); (7) Dry Creek Adjudication; and (8) discussions with Department of Ecology regional program staff.

A field investigation was conducted on November 7, 2011, by Dan Tolleson. Mr. Buckley owns both the proposed place of use and the proposed points of diversion. The project is located adjacent to Dry Creek, approximately 1.5 miles northeast of Lowden, Washington.

Dry Creek is a tributary to the Walla Walla River and a sub-basin within WRIA 32. The proposed project is located at the lower end of the Dry Creek near its confluence with the Walla Walla River. Much of the proposed place of use is irrigated by existing water rights.

Proposed Use and Basis of Water Demand

The proposed use of this application is to provide winter water from November 15 to April 15 to irrigate 124.9 acres. This winter water is proposed to fill the soil profile for deficit irrigation during late spring and summer months when water is often not available or limited under existing rights. The annual quantity requested is 3 acre-feet per acre for a total of 374.7-acre-feet.

Impairment Considerations

Impairment is an adverse impact on the physical availability of water for a beneficial use that is entitled to protection. A water right application may not be approved if it would:

- Interrupt or interfere with the availability of water to an adequately constructed groundwater withdrawal facility of an existing right. An adequately constructed groundwater withdrawal facility is one that (a) is constructed in compliance with well construction requirements and (b) fully penetrates the saturated zone of an aquifer or withdraws water from a reasonable and feasible pumping lift.
- Interrupt or interfere with the availability of water at the authorized point of diversion of a surface water right. A surface water right conditioned with instream flows may be impaired if a proposed use or change would cause the flow of the stream to fall to or below the instream flow more frequently or for a longer duration than was previously the case.
- Interrupt or interfere with the flow of water allocated by rule, water rights, or court decree to instream flows.
- Degrade the water quality of the source to the point that the water is unsuitable for beneficial use by existing users (e.g., via sea water intrusion).

The proposed source is located within the Dry Creek Adjudicated Basin. Water is not always available for the existing water rights within the basin. The additional consumptive water use proposed under

this project will impair existing water rights, by reducing the water available. In addition, Dry Creek is a tributary to the Walla Walla River, which does not always meet its instream flows. With approval of this application, less water would flow into the Walla Walla River that would cause further impairment of the instream flow and senior water rights.

Water Availability

For water to be available for appropriation, it must be both physically and legally available.

Physical availability

For water to be physically available for appropriation there must be ground or surface water present in quantities and quality and on a sufficiently frequent basis to provide a reasonably reliable source for the requested beneficial use or uses. In addition, the following factors are considered:

- Volume of water represented by senior water rights, including federal or tribal reserved rights or claims;
- Water right claims registered under Chapter 90.14 RCW
- Ground water uses established in accordance with Chapter 90.44 RCW, including those that are exempt from the requirement to obtain a permit; and
- Potential riparian water rights, including non-diversionary stock water.
- Lack of data indicating water usage can also be a consideration in determining water availability, if the department cannot ascertain the extent to which existing rights are consistently utilized and cannot affirmatively find that water is available for further appropriation.

Legal availability

To determine whether water is legally available for appropriation, the following factors are considered:

- Regional water management plans – which may specifically close certain water bodies to further appropriation.
- Existing rights – which may already appropriate physically available water.
- Fisheries and other instream uses (e.g., recreation and navigation). Instream needs, including instream and base flows set by regulation. Water is not available for out of stream uses where further reducing the flow level of surface water would be detrimental to existing fishery resources.
- The Department may deny an application for a new appropriation in drainage where adjudicated rights exceed the average low flow supply, even if the prior rights are not presently being exercised. Water would not become available for appropriation until existing rights are relinquished for non-use by state proceedings.

The application proposes to divert two cubic feet per second from November 15 to April 15 for irrigation. According to available stream flow data, Dry Creek has been observed to have water flows as low as 0.3 cubic feet per second during the season of use requested by the applicant. In addition, flows are often similar to the requested diversion rate. This means that water is not always physically available.

In accordance with WAC 173-532-045, any request for a new water right appropriation must meet a specific list of criteria, in addition to the applicable requirement of law before a permit can be issued. This application requests a consumptive irrigation water right from a surface source from November 15 to April 15. The only consumptive projects that can receive a new water right permit, in accordance with WAC 173-532, are those that provide an environmental enhancement. This proposed project will

not meet the requirements set forth in WAC 173-532, meaning water is not legally available for the project. In addition, the requested season of use from November 15-30 is during the stream closure described in WAC 173-532-040, when no new water diversion is allowed.

Beneficial Use

The use of water for irrigation purposes is defined in statute as a beneficial use (RCW 90.54.020(1)).

Public Interest Considerations

There has been one public expression of protest or concern regarding the subject proposal, and findings through this investigation indicate that this project would be detrimental impact to the public welfare through issuance of the water right. The applicant is proposing to divert water from a source closed by rule (WAC 173-532). This rule was updated in August of 2007, with extensive public participation by way of pre-proposal workshops, formal hearings and rule implementation workshops. The result of this was to close all surface sources to new consumptive appropriations unless there is an environmental benefit. This indicates that issuing new water for any other uses than those expressly listed in the rule is not in the public interest.

Consideration of Protests and Comments

One letter was received against granting this change, in response to the public notice. Louis Riley's letter of protest was received on December 21, 1995. The following is the summary of Mr. Riley's major concerns and Ecology's responses:

- *Concern:* Mr. Riley indicated in his letter that he was concerned that the proposed project under S3-29797 would negatively affect and impair his senior water rights. He maintains that he uses winter water in most years due to the lack of water in Dry Creek in the summer months.
- *Response:* Since water is not available for the proposed project and no permit will be issued, there will be no change to the water available to Mr. Riley.

Other Rights Appurtenant to the Place of Use

There are multiple overlapping rights within the proposed place of use. Their relationship will not be determined in this report since water is not available.

Conclusions

In conclusion, water is not available for the proposed appropriation. It is not always physically available due to actual stream flows, legally available according to the WAC 173-532, will cause impairment and is not in the public interest.

RECOMMENDATIONS

Based on the above investigation and conclusions, I recommend that this request for a water right be **denied**.
